## JL 450

The JL450 is a farm forestry logging winch weighing 4.5 tonne, which is designed to operate behind smaller tractors and skid steer up to 60HP. It is perfect for use by farm foresters wanting to harvest and move large logs without requiring specialised harvesters or forwarders.

Available with a safety screen, the rope cable engagement allows the safe operation of the winch from the ground away from the load, or from the tractor itself.

The JL 450 can be delivered as either PTO or hydraulic operation, making it suitable for use across most tractors and skid steer machinery.

All TUFFASS Machinery winches are heavy duty forestry equipment and are specially designed to allow for safe and efficient operation.
